

CHAPTER 9

COAXIAL CONNECTORS

Coaxial connectors are classified according to a series designation (BNC, C, HN, N, etc.) and are identified by a military number (UG-()/U). Table 9-1 identifies the series of common military-numbered connectors; the following paragraphs briefly describe each series. Table 9-1 also makes reference in the "TABLE" column, to other tables in this handbook which give more detailed data for the connectors. For a more complete listing of coaxial connectors, consult the current issue MIL-HDBK-216.

9.1 BNC SERIES

The BNC-series connectors (see figure 9-1) are small, lightweight, and weatherproof, with a bayonet-type coupling for quick connect and disconnect. They have a nominal impedance of 50 ohms, a peak voltage rating of 500 volts, and a practical frequency limit of 10,000 MHz (improved versions). This series is designed for use with small cables such as RG-55/U and RG-58/U. The BNC connectors are listed in table 9-2, installation procedures for standard BNC connectors are given in figure 9-2, figure 9-3 illustrates installation procedures for improved-series BNC connectors, and figure 9-4 is a mating diagram. Symbols used in the mating diagram are explained in figure 9-5.

9.2 C SERIES

The C-series connectors (see figure 9-6) are medium-sized, weatherproofed, and feature a bayonet-type coupling. They have a nominal impedance of 50 ohms, a peak rating of 1.5 kV, and a frequency limit of 10,000 MHz (except for the high-voltage type). The high-voltage type, rated at 4 kV (peak), should not be used above 2000 MHz. These connectors are designed for use with medium-sized cables. Common C-series connectors are listed in table 9-3, installation procedures are given in figure 9-7, and figure 9-8 is a mating diagram.

9.3 HN SERIES

The HN-series connectors (see figure 9-9) are medium-sized, weatherproofed, and use screw-type coupling. They have nominal impedance of 50 ohms. The HN-series connectors are listed in table 9-4, installation procedures are given in figures 9-10 and 9-11, and figure 9-12 is a mating diagram. These connectors were designed for use in high-voltage applications (up to 5 kV peak). However, results of tests conducted by U.S. Navy Underwater Sound Laboratories, in April 1952 and May 1957, indicate that at RF frequencies the voltage characteristics of HN connectors are no better than those of C and N series connectors. Consequently, the HN connectors should be used for replacement purposes only.

9.4 LC AND LT SERIES

The LC- and LT-series connectors (see figure 9-13) are the largest series employing threaded couplings that are approved for use with flexible coaxial cables. Standard LC- and LT-connectors are rated at 5 kV (peak); certain LC-connectors are rated at 10 kV. LC-connectors are recommended at frequencies up to 1000 MHz; the LT-series may be used up to 2500 MHz. LT-connectors are a modified version of the LC-series, but the two are not interchangeable; however, adapters are available to permit interconnection of the LC- and LT-series. LC- and LT-series connectors are listed in table 9-5. Installation procedures are given in figure 9-14, figure 9-15 illustrates installation procedures, and figure 9-16 and 9-17 are mating diagrams for these series.

9.5 N SERIES

The N-series connectors (see figure 9-18) are medium-sized, weatherproofed, and use a screw-type coupling. They have a peak rating of 15 kV and a frequency limit of 10,000 MHz. Both 50- and 70-ohm connectors are available; however, the 50- and 70-ohm connectors do not mate properly. N-series connectors are listed in table 9-6, installation procedures are given in figures 9-19 and 9-20, and figures 9-21 and 9-22 are mating diagrams.

9.6 PULSE CONNECTORS

9.6.1 Ceramic-Insert

Ceramic-insert pulse connectors (see figure 9-23) are commonly classified as Types A and B (see table 9-7).

Type A connectors are used in Naval avionics equipment. Although flash-overs across the ceramic-insert occasionally occur at high altitudes, no damage results to the connector and they may be used as soon as the voltage stress is relieved. Type B connectors are used for shipboard applications and have a peak-rating of 15 kV. Installation procedures for this series are given in figure 9-24, figure 9-25 is a mating diagram.

9.6.2 Rubber-Insert

Rubber-insert pulse connectors (see figure 9-26) are weatherproofed, and are designed to mate with existing molded connectors of the Western-Electric Company type. These connectors have a peak voltage rating of 5 kV at an altitude of 50,000 feet, and can be connected to cables that have an insulating neoprene layer under the braid, such as RG-77 and 78/U. They also may be used with cables that have rubber under the braid, such as RG-25, -26, and -64/U, providing special care is used during connector assembly. Table 9-8 lists common rubber-insert pulse cable connectors. Figure 9-27 gives installation procedures for these connectors; figure 9-28 is a mating diagram.

9.6.3 Triaxial

The triaxial pulse type connectors are shown in table 9-9.

9.7 QDL-SERIES

The QDL-series connectors (see figure 9-29) are large, weatherproofed, with quick-connect and -disconnect couplings. They have a nominal impedance of 50 ohms, a maximum peak voltage rating of 9 kV, and a practical frequency limit of 1000 MHz. Table 9-10 lists common QDL connectors, figure 9-30 gives installation information, and figure 9-31 is a mating diagram.

9.8 QDS-SERIES

The QDS-series connectors (see figure 9-32) are medium-sized, weatherproofed, and have quick-connect and -disconnect couplings. They have a nominal impedance of 50 ohms, a peak-rating of 1 kV, and a practical frequency limit of 10,000 MHz. Table 9-11 lists common QDS connectors, figure 9-33 gives installation information, and figure 9-34 is a mating diagram.

9.9 QL AND QM SERIES

QL and QM connectors (see table 9-12) are high power, high voltage, low VSWR connectors for use with large size cables RG-217, 218, 219, 220, and 221/U where series LC, LT, HN, C and N connectors have been used in the past. The QM series designated for use with RG-217/U and the QL series for use with RG-218, 219, 220 and 221/U have a maximum VSWR of 1.27 to 1 on mated pairs of cable assemblies up to 5,000 MHz. Corona extinction values range from 6,000 volts to 60 cycle RMS for the RG-217/U assemblies to 12,500 volts RMS for the RG-218/U assemblies.

9.10 SM-SERIES

The SM-series connectors (see figure 9-35) are nonweatherproof and are designed to be used with cables of 1/4-inch overall diameter or smaller. They are limited to frequencies below 1000 MHz and peak voltages below 100 volts. Table 9-13 lists common SM-series connectors, figure 9-36 gives installation information, and figure 9-37 is a mating diagram.

9.11 TWIN SERIES

The connectors shown in table 9-14 are known as Twin Connectors. They may be used with numerous small- and medium-sized cables. They are not constant-impedance connectors and will therefore introduce some voltage reflection. They are generally satisfactory at frequencies up to 200 megacycles and may be used with caution up to 500 megacycles. They may be used at peak voltages up to 500 volts.

These connectors are available in small twin-conductor types (weatherproof and non-weatherproof) and large twin-conductor types (nonweatherproof). The weatherproof and non-weatherproof feature is the only distinguishing feature. These two groups are not interchangeable.

9.12 TPS SERIES

Series TPS connectors (see table 9-15) are weatherproof and designed to produce minimum electrical discontinuities in small size solid dielectric 50 ohms coaxial

cable up to a frequency of 10,000 megacycles. They are rated at 500 volts RMS at sea-level. Their use is governed by the temperature limitations of their associated cables.

9.13 UHF SERIES

The UHF-series connectors (see figure 9-38) are available in both large and small sizes. They do not have a constant impedance, and provide satisfactory operation at frequencies up to 200 MHz. The peak-rating is 500 volts. Table 9-16 lists common UHF connectors, figure 9-39 gives installation information, and figure 9-40 is a mating diagram.

9.14 MINIATURE (SCREW-ON) SERIES

The connectors shown in table 9-17 are miniature, light weight, employing screw type couplings, and polytetrafluoroethylene (teflon) dielectric. They have a nominal impedance of 50 ohms, a sea level breakdown voltage of 1500V RMS, a practical frequency limit of 10,000 MHz, and are designed for operation up to 200°C.

9.15 ADAPTERS AND ANCILLARY ITEMS

Adapters may be used to couple flexible cables with connectors of the same series, to connect flexible cables with connectors of different series, or to connect a flexible cable to a rigid line. The adapters used to couple cables containing connectors of the same series are listed and illustrated as follows:

<u>Connector Series</u>	<u>Table</u>	<u>Figure</u>	<u>Connector Series</u>	<u>Table</u>	<u>Figure</u>
BNC	9-8	9-41	Triaxial	9-9	
C	9-19	9-42	QDL	9-24	9-46
HN	9-20	9-43	QDS	9-24	9-46
LC	9-21	9-44	QL and QM	9-12	
LT	9-22	9-44	SM		9-47
N	9-23	9-45	Twin	9-14	
Pulse, Ceramic	9-23		TPS	9-15	
Pulse, Rubber	9-23		UHF	9-25	9-48
			Miniature	9-17	

Table 9-26 lists between-series adapters, and figure 9-29 shows examples of these. Table 9-27 lists adapters that are used to connect flexible cables to rigid lines. The adapter is installed on the rigid line and the cable is joined to the adapter with standard connectors. Table 9-28 lists adapters (cable clamp-rigid line clamp ends) that must be installed on both the flexible cable and the rigid line.

1154	N Female-Rigid Line Clamp	N Male	1-5/8", 50-ohm Rigid
1155	N Female-Rigid Line Clamp	N Male	7/8", 50-ohm Rigid
1251	LT Female-Rigid Line Clamp	LT Male	1-5/8", 50-ohm Rigid
1274	LT Female-Rigid Line Clamp	LT Male	7/8", 50-ohm Rigid

NOTES:

1 Asterisks indicate that the adapter is not weatherproof.

2 The adapter is installed directly on the rigid line. The cable couples to the adapter by means of connectors.

AIAG 760

Table 9-28. Pressurized Splice Adapters for Cable to Rigid Line

UG-()/U	TYPES OF ENDS	RG-()/U	CONNECTS LINE
161	Cable Clamp-Rigid Line Clamp	19, 20	3-1/8", 50-ohm Rigid
168	Cable Clamp-Rigid Line Clamp	17, 18	1-5/8" Rigid
207	Cable Clamp-Rigid Line Clamp	14	RG-44/U Sub-supported
256	Cable Clamp-Rigid Line Clamp	14	7/8", 70-ohm Rigid
257	Cable Clamp-Rigid Line Clamp	14	7/8", 50-ohm Rigid
258	Cable Clamp-Rigid Line Clamp	17, 18	3-1/8", 50-ohm Rigid
313	Cable Clamp-Rigid Line Clamp	81	7/8" Rigid
315	Cable Clamp-Rigid Line Clamp	82	7/8" Rigid

STEP 5: TAPER DIELECTRIC WITH MX-103/U TRIMMING TOOL. WHEN TAPERING DIELECTRIC OF CABLE FOR PLUG ASSEMBLY, PUSH CONTACT STOP OF TOOL TO BOTTOM OF SLOT. TOOL WILL STOP CUTTING WHEN SHOULDER OF CON-

TACT BUTTS AGAINST STOP. FOR JACK ASSEMBLY, SEE THAT THE STOP IS AT THE TOP OF THE SLOT. CABLE WILL BE PROPERLY TAPERED WHEN END OF CENTER CONTACT IS FLUSH WITH END OF TRIMMER BODY.

WITH MALE CONTACT

WITH FEMALE CONTACT

STEP 6: A. - APPLY A SMALL AMOUNT OF SILICONE COMPOUND (AMPHENOL 307 OR EQUIVALENT) TO THE TAPERED SURFACE OF THE DIELECTRIC.
B. - INSERT ASSEMBLY INTO CONNECTOR BODY.
C. - TIGHTEN NUT #1 (NUT #2 IF CABLE IS ARMORED) SECURELY WITH A WRENCH.

D. - STRAIGHTEN BULGE IN ARMOR.
E. - CUT ARMOR SO THAT IT CAN BE CLAMPED BETWEEN NUT #2 AND CAP.
F. - TIGHTEN CAP SECURELY ON NUT #2 WITH A WRENCH. IN CONNECTORS CONTAINING A GLAND, THE KNIFE EDGE SHOULD CUT THE GASKET IN HALF WHEN TIGHTENED SUFFICIENTLY.
