TELETYPE EQUIPMENT

DESCRIPTION SHEETS

TELETYPE EQUIPMENT LIST — INDEX

The TELETYPE EQUIPMENT LIST consists of individual General Description Sheets dealing with the various Teletype Sets. Digits appearing before the decimal point in the key number printed on each General Description Sheet indicate the section of this binder in which the pages should be filed. For convenience these various sections have been cross indexed:

On Index Page 2 Sets are classified and indexed by TELETYPE MODEL NUMBER.

Index Pages 3, 4 and 5 Contain a complete NUMERICAL GUIDE both of Sectional Headings and the published General Description Sheets.

Omission of the title of a numbered section in the index indicates the information is not yet scheduled for release.

Immediately following the Index Pages you will find supplementary sheets covering Keytops and Type Arrangements. From time to time other supplementary material relating to equipment will be prepared for filing in this portion of the booklet. Revised General Index Pages, and filing instructions will accompany the supplementary material you will receive for filing as additional General Description Sheets are published for inclusion in the TELETYPE EQUIPMENT LIST.

TELETYPE MODEL 14 SENDING-RECEIVING TAPE PRINTER SET WITH TABLE

The Teletype Model 14 sending-receiving tape printer set provides means for interchanging type-written telegraph messages between two or more points. Transmission is accomplished through direct keyboard operation, and messages are received in printed form on standard width (approximately $\frac{3}{8}$ ") tape.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

- FP** **Typing Unit** (with synchronous or governed motor; type arrangement as specified)
- FK** **Keyboard Base** (keytop arrangement as specified)
- RY** **Line Relay**
- C** **Cover**
- Copyholder**
- XRT** **Table ***
- REC** **Rectifier** (not required at DC stations) *
- Speed Indicator** (required with governed motors)
- Power Accessories** (fusetrons, resistor assemblies, etc. as required)

* Note: Not depicted on opposite page—see set photograph on page 1.

TELETYPE MODEL 14 RECEIVING-ONLY TAPE PRINTER SET WITH TABLE

The Teletype Model 14 receiving-only tape printer set provides means for receiving typewritten telegraph messages in printed tape form. The standard tape used by Teletype Model 14 printers is approximately $\frac{3}{8}$ " wide.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

- FP** **Typing Unit** (with synchronous or governed motor; type arrangement as specified)
- FB** **Base**
- RY** **Line Relay**

TELETYPE MODEL 15 SENDING-RECEIVING PAGE PRINTER SET WITH CONSOLE

The Teletype Model 15 sending-receiving page printer set provides means for interchanging typewritten telegraph messages between two or more points. Transmission is accomplished through direct keyboard operation, and messages are received in printed page form on continuous roll or multifold paper.

The all-metal console encloses and supports all essential equipment for the set. Designed both for appearance and utility, this console provides maximum convenience and service accessibility whether the set is employed as an individual station or in composite arrangement with other Teletype console sets.

(Complete description, installation and adjustment information for this console may be obtained from Teletype Specification S-5537.)

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype

TELETYPE MODEL 15 SENDING-RECEIVING PAGE PRINTER (WITH PERFORATOR TRANSMITTER KEYBOARD) SET WITH CONSOLE

This Teletype Model 15 sending-receiving-perforating set combines facilities for:

- (1) Direct interchange of typewritten telegraph messages.
- (2) Perforation of tape for subsequent transmission.

The perforator transmitter keyboard which serves for direct sending may also be operated independently (whether or not an incoming message is being received) as a high speed perforator in the preparation of tape for subsequent transmission. Or if desired, tape may be perforated simultaneously with direct transmission. Incoming messages are received in printed page form on either continuous roll or multifold paper.

The all-metal console encloses and supports all essential equipment for the set. Designed both for appearance and utility, this console provides maximum convenience and service accessibility whether the set is employed as an individual station or in composite arrangement with other Teletype console sets.

(Complete description, installation and adjustment information for this console may be obtained from Teletype Specification S-5559.)

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype

SET IN SERVICING POSITION

TELETYPE MODEL 15 TAPE TRANSMISSION DUPLEX SET WITH PAGE PRINTER AND TABLE

The Teletype Model 15 tape transmission duplex set with receiving-only printer provides means for interchanging typewritten telegraph messages over full-duplex or half-duplex circuits. Messages to be transmitted are prepared on the keyboard perforator and automatically transmitted by the transmitter distributor. Incoming messages are recorded in printed page form on the Model 15 receiving-only page printer. When used on a full-duplex circuit, this set will send and receive messages simultaneously.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

Model 15 Receiving-Only Page Printer consisting of:

- BP** **Typing Unit** (friction or sprocket paper feed; type arrangement as specified)
- BB** **Base**
- MU** **Motor Unit** (synchronous or governed)
Set of Gears (different ratios for synchronous and governed motor units)
- RY** **Line Relay**

**TELETYPE MODEL 15 TAPE TRANSMISSION DUPLEX SET WITH PAGE
PRINTER AND TABLE (including facilities for direct keyboard transmission)**

The Teletype Model 15 tape and direct keyboard transmission duplex set with sending-receiving page printer provides means for interchanging typewritten telegraph messages over full-duplex or half-duplex circuits. Generally, messages to be transmitted are prepared on the keyboard perforator and transmitted by the transmitter distributor. Transmission also may be accomplished through direct keyboard operation. This provides additional flexibility inasmuch as the automatic tape transmission may be interrupted to inject brief keyboard messages without removing the tape from the transmitter. Incoming messages are recorded in printed page form on the Model 15 sending-receiving page printer. This set when used on a full-duplex circuit will send and receive messages simultaneously.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

Model 15 Sending-Receiving Page Printer consisting of:

- BP** **Typing Unit** (friction or sprocket paper feed; type arrangement as specified)
- BB** **Base**

TELETYPE STROBOSCOPIC SIGNAL DISTORTION TEST SET

The Teletype stroboscopic signal distortion test set is a general purpose test instrument arranged:

- (1) To transmit signals for checking operational margins of Teletype start-stop selectors.
- (2) To check the responses of relays or start-stop regenerative repeaters in a local circuit.
- (3) Under certain conditions, to check the efficiency of Teletype circuits and line equipment by measuring accurately the impulse length of printing telegraph signals originating from an external transmitting unit.

Either normal or distorted signals or a test message may be transmitted by this instrument by positioning various keys mounted on the panel. Other controls provide convenient adjustment for any desired type or percentage of signal distortion. A built-in stroboscope permits signals to be checked visually against a graduated scale. The size of the unit is such that it may be set on a shelf, movable bench or a table.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

DXD Stroboscopic Signal Distortion Test Distributor with viewing hood *

MU Motor Unit (synchronous or governed)

Set of Gears (different ratios for synchronous and governed motor units)

TELETYPE PORTABLE SIGNAL DISTORTION TEST SET IN CARRYING CASE

The Teletype portable signal distortion test set is a motor driven unit arranged to transmit signals for testing Teletype circuits and checking the operating margins of start-stop selectors on Teletype apparatus. These signals may be a repetition of Teletype signal combinations or telegraph reversals. Combinations to be transmitted are set up by positioning a group of keys and switches mounted on the panel. The transmitted signals may be normal (undistorted) or they may be controlled to have 20% bias or end distortion, either marking or spacing. This instrument was designed to meet the demand for a portable test distributor for limited duty and intermittent use only. For heavy duty applications, or for more diversified test facilities the Teletype Stroboscopic Test Set is recommended.

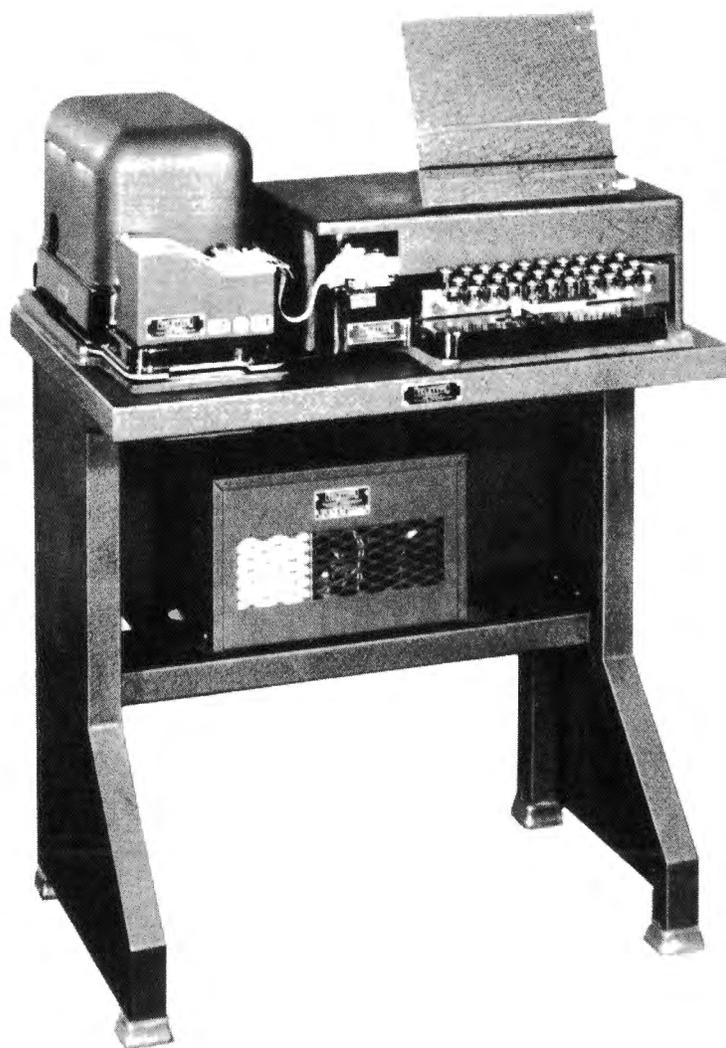

PORTABLE TEST SET WITH CARRYING CASE CLOSED

This set consists of a test unit securely mounted in a metal carrying case with a power cord and circuit jack, and may be supplied with either a synchronous or governed motor.

APPROXIMATE WEIGHT		DIMENSIONS

**TELETYPE MODEL 14 PERFORATOR TRANSMITTER DISTRIBUTOR SET
WITH TABLE**

The Model 14 perforator transmitter distributor set provides means for keyboard preparation of printing telegraph messages in perforated tape form, and also for automatic transmission of printing telegraph messages under control of perforated tape.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

GPE Model 14 Keyboard Perforator (keytop arrangement as specified)

XD Model 14 Transmitter Distributor (with synchronous or governed motor)

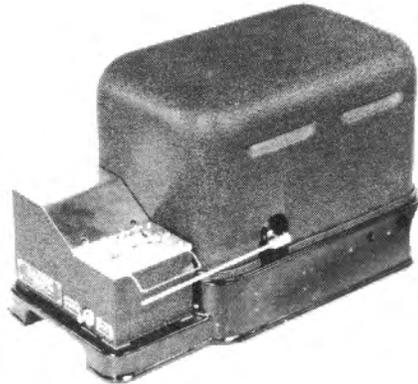

XT Table (with perforator cover and copyholder) *

REC Rectifier (not required at DC stations) *

Speed Indicator (required with governed motors)

Power Accessories (fusetrons, resistor assemblies, etc., as required)

* Note: Not depicted on this page—see set photograph on page 1.

**TELETYPE MODEL 14 NONTYPING REPERFORATOR
TRANSMITTER DISTRIBUTOR SET WITH TABLE**

The Teletype Model 14 nontyping reperforator transmitter distributor set provides means for automatic reception of printing telegraph messages in perforated tape form, and also for automatic transmission of printing telegraph messages under control of perforated tape. It is commonly used for relaying messages from one circuit to another.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

- Model 14 Nontyping Reperforator**, consisting of:
 - RPE** **Nontyping Reperforator Unit**
 - MU** **Motor Unit** (synchronous or governed)

TELETYPE MODEL 15 KEYBOARD PERFORATOR

- Provides means for keyboard preparation of messages or other data in 5-unit fully perforated tape form.
- Used in association with transmitter distributors for automatic transmission on printing telegraph circuits.
- Contains mechanical locking device—not more than one key-lever can be depressed at a time.
- Keylever pressure is adjustable to suit individual finger touch preference.
- Keyboard speed is dependent upon ability of the operator.
- Equipped with numerical character counter designed to register only when a character or space

keylever is depressed. Counter may be mounted either left or right of keyboard—enclosed by an extension of perforator cover for left-hand mounting as illustrated, or furnished with an individual cover when located at right. Counter is supplemented by adjustable end-of-line indicator lamp.

General Operating Features

- Anti-chatter mechanism to assure single and positive perforation of tape for each keylever depression.
- Accommodates standard width $\frac{11}{16}$ " tape.
- Backspace lever for correction of errors in tape.

**TELETYPE MODEL 31 SENDING-RECEIVING TAPE PRINTER SET
(LIGHTWEIGHT)**

The Teletype Model 31 sending-receiving tape printer set is a compact light weight printer which provides means for interchanging typewritten telegraph messages between two or more points. It may be operated with Teletype Model 14; Model 15 or Model 19 equipment, and is especially adapted for mobile installations (in conjunction with appropriate terminal equipment) in planes, ships, trains, trucks, public and private automobiles and various other applications where small size and light weight are of primary importance. Transmission is accomplished through direct keyboard operation and messages are received in printed form on standard width (approximately $\frac{3}{8}$ ") tape.

Teletype Corporation
Equipment List

This set consists of units and accessories as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Apparatus
Code**

KP **Typing Unit** (includes motor drive — power supply to be specified when ordering)

KK **Keyboard Base**

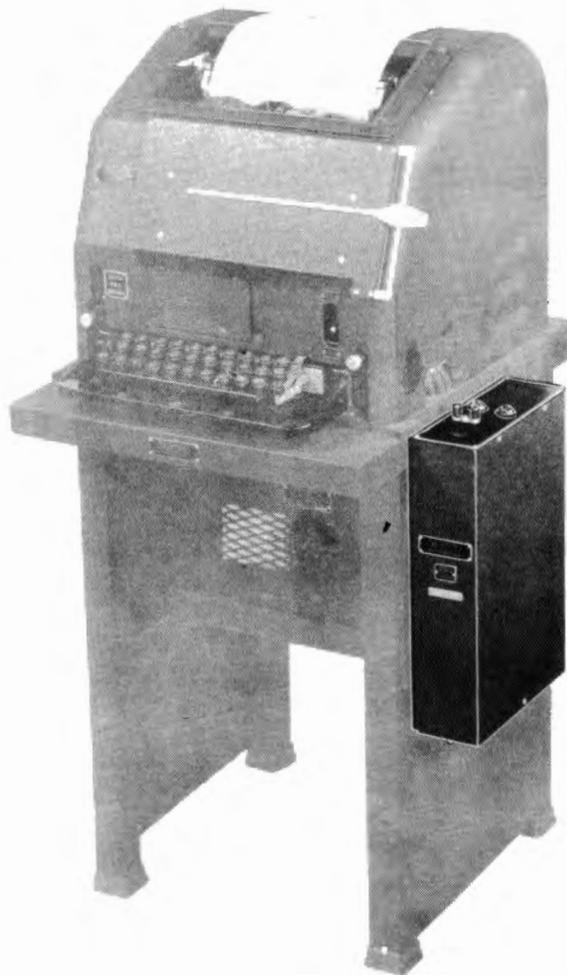

KPC **Cover**

Speed Indicator, (required with governed motors)

Approximate Operating Power Requirements:

75 Watts.

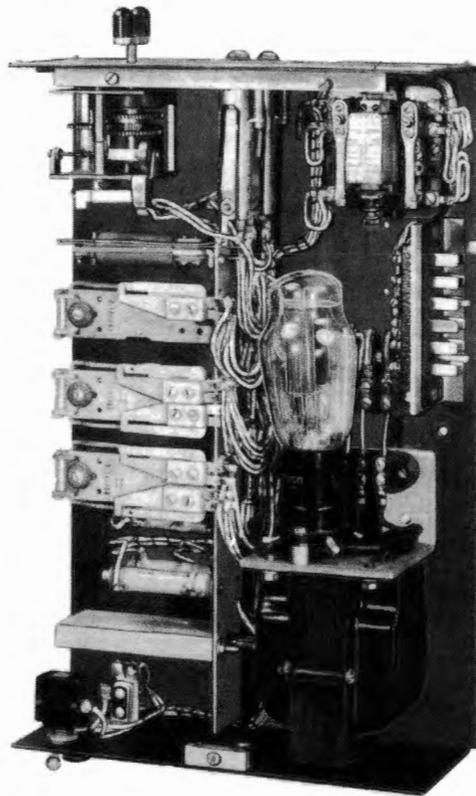

TELETYPE PARTY LINE STATION SELECTOR FOR TABLE MOUNTING

The Teletype party line station selector is an auxiliary station selecting device for Model 15 printer sets which enables any station on a telegraph loop circuit to establish connection automatically with any other similarly equipped station or group of stations on the circuit, through the medium of the printer selection code. Automatic indication that communication has been established with the called station is provided through an answer-back feature.

A complete selector for one station consists of a control box which may be mounted on the side of a printer table*, three contact assemblies used in the printer typing unit, an inter-connecting cable with base attachments, and an answer-back magnet assembly used in the keyboard.

*Or in a separate console — see General Description Sheet 18.D2-1.

INTERIOR OF CONTROL BOX*

STATION SELECTOR CONTROL BOX FOR TABLE MOUNTING

(Complete description, installation and adjustment information and catalogue of parts for the Teletype Party Line Station Selector will be found in Teletype Specification S-5167.)

Power Requirements:

This unit is arranged to operate on 110 volts direct current. For those installations where a direct current power supply is not available, a compact rectifier of the vacuum tube type (for operation on 110 volts 50/60 cycle AC) which fits within the control box is available as a supplementary item. When equipped with the rectifier unit, the power consumption of the selector is approximately 45 watts AC. Without the rectifier, approximately 30 watts DC is required.

TELETYPE PARTY LINE STATION SELECTOR WITH CONSOLE

The Teletype party line station selector is an auxiliary station selecting device for Model 15 printer sets which enables any station on a telegraph loop circuit to establish connection automatically with any other similarly equipped station or group of stations on the circuit, through the medium of the printer selection code. Automatic indication that communication has been established with the called station is provided through an answer-back feature.

A complete selector for one station consists of a control box, three contact assemblies used in the printer typing unit, an inter-connecting cable with base attachments, and an answer-back magnet assembly used in the keyboard.

The all-metal console, which accommodates either one or two console type station selector control boxes, may be associated with Teletype Model 15 printer consoles in various composite arrangements. (Complete description, installation and adjustment information for this console may be obtained from Teletype Specification S-5549)

TELETYPE TRANSMITTER DISTRIBUTOR

This Teletype transmitter distributor provides means for automatically translating 5-unit code combinations (previously perforated in a paper tape by any one of several models of Teletype perforators or reperforators) into electrical impulses and transmitting these impulses to one or more receiving stations.

SLIP CONNECTION BASE FOR USE WITH TELETYPE TRANSMITTER DISTRIBUTOR

This transmitter distributor consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

XD Transmitter Distributor (5-unit code) with synchronous or governed motor

Speed Indicator (required with governed motors)

Slip Connection Base (this base is furnished on Teletype tables arranged for transmitter distributor mounting—otherwise it must be ordered as a separate item.)

APPROXIMATE WEIGHT		DIMENSIONS (INCLUDING BASE)		
NET	SHIPPING (DOMESTIC)	WIDTH	DEPTH	HEIGHT
30 lbs.	38 lbs.	8 $\frac{3}{4}$ "	16 $\frac{1}{4}$ "	9 $\frac{1}{2}$ "

Approximate Operating Power Requirements:

65 Watts at 115 Volts AC (60 cycles)

TELETYPE MULTIPLE MESSAGE TRANSMITTER DISTRIBUTOR

The Teletype multiple message transmitter distributor provides space-saving tape transmitting facilities for use in relay offices or message centers. It consists of a base equipped with a motor and three* transmitter distributors (5-unit code), each of which operates independently of the others in transmitting, in the form of electrical impulses, code combinations previously perforated in paper tape. The set may be mounted on a table or shelf or installed conveniently in a Teletype Universal Cabinet.

*A Teletype six-gang message transmitter distributor also is available for shelf or table mounting.

This multiple message transmitter distributor consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

MXB Message Transmitter Distributor Base (3-gang) with single synchronous or governed motor

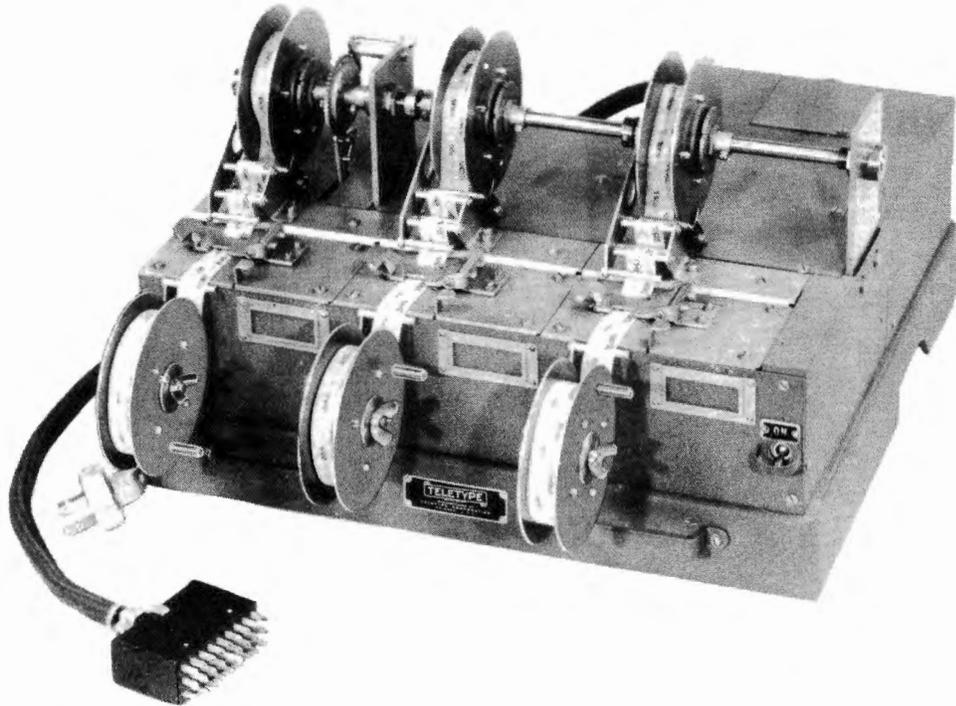

MXD Message Transmitter Distributor (consisting of 3 transmitting units)

Speed Indicator (required with governed motor)

APPROXIMATE WEIGHT		DIMENSIONS		
NET	SHIPPING (DOMESTIC)	WIDTH	DEPTH	HEIGHT
46 lbs.	63 lbs.	17"	16¼"	6¼"

Approximate Operating Power Requirements:

55 Watts at 115 Volts AC (60 cycles)

TELETYPE MULTIPLE NUMBERING TRANSMITTER DISTRIBUTOR

The Teletype multiple numbering transmitter distributor provides automatic message identification facilities for three transmitting stations (5-unit code). Each of the three transmitter distributor units is equipped with the necessary relay controls and accessories to govern the automatic insertion (prior to transmission of the message proper) of the message number, station identification, and any other essential code information, on all messages transmitted by an associated message transmitter distributor.

All units, including the motor, are mounted on a single base, identical in size and shape with the space-saving Teletype 3-gang message transmitter distributor with which this apparatus frequently is associated in message center or relay office operations.

This multiple numbering transmitter distributor consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

MXB Numbering Transmitter Distributor Base (3-gang) with single synchronous or governed motor (equipped with tape reels as illustrated)

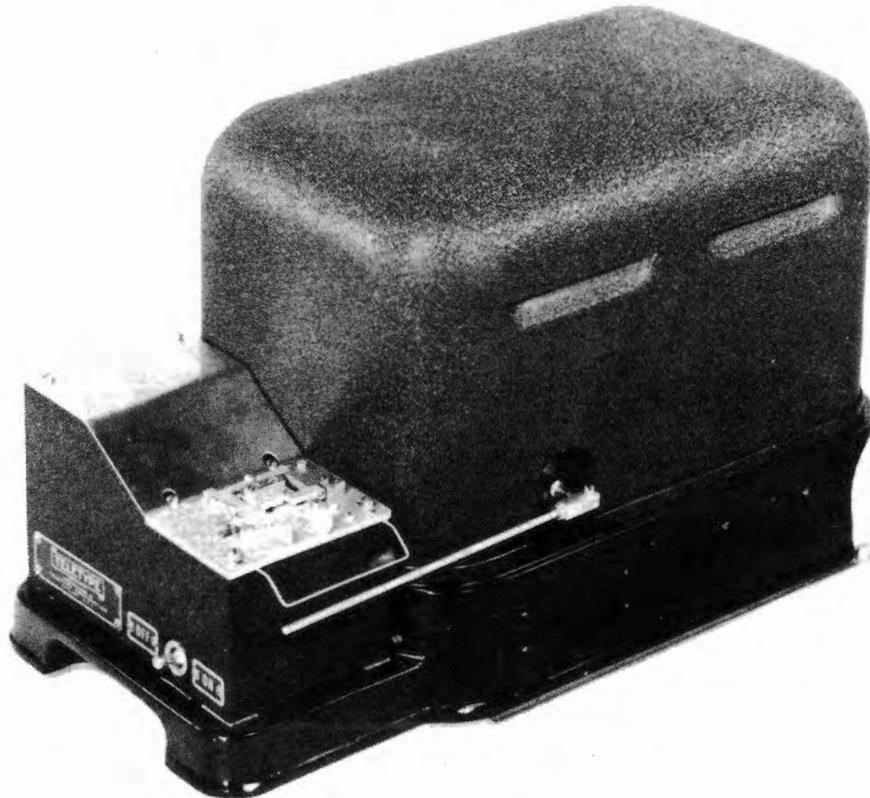

MXD Numbering Transmitter Distributor (consisting of 3 transmitting units)

Speed Indicator (required with governed motor)

APPROXIMATE WEIGHT		DIMENSIONS (INCLUDING REELS)		
NET	SHIPPING (DOMESTIC)	WIDTH	DEPTH	HEIGHT
54 lbs.	75 lbs.	17"	20½"	10¼"

Approximate Operating Power Requirements:

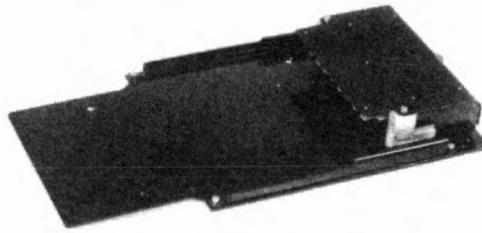

65 Watts at 115 Volts AC (60 cycles)

TELETYPE TRANSMITTER DISTRIBUTOR (6-UNIT CODE)

This Teletype transmitter distributor provides means for automatically translating 6-unit code combinations (previously perforated in a paper tape by a 6-unit perforator or reperforator) into electrical impulses and transmitting these impulses to one or more receiving stations.

This transmitter distributor, which is used primarily in conjunction with Teletypesetter applications, **will not operate** with Teletype equipment employing the conventional 5-unit code.

SLIP CONNECTION BASE FOR USE WITH TELETYPE 6-UNIT TRANSMITTER DISTRIBUTOR

This transmitter distributor consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype
Code**

XD Transmitter Distributor (6-unit) with synchronous or governed motor

Speed Indicator (required with governed motors)

Slip Connection Base (This base is furnished on Teletype tables arranged for transmitter distributor mounting — otherwise it must be ordered as a separate item)

APPROXIMATE WEIGHT		DIMENSIONS

TELETYPE CORPORATION

**100 WORDS
PER MINUTE**

TELETYPE TAPE TRANSMITTER DISTRIBUTOR WITH ALL-METAL CLUTCH

Designed for the transmission of messages or other data from tape...on 5-unit code printing telegraph circuits...at 100 words per minute.

Can be employed as an individual unit, or to replace slower speed Transmitter Distributors in Perforator Transmitter Distributor Sets, Reperforator Transmitter Distributor Sets, Model 19 Sets, etc.

Equipped with Teletype's all-metal clutch of advanced design—which eliminates the wear and constant need for lubrication associated with conventional felt clutches. Re-

quires oiling only once or twice a year.

This new, long-life clutch operates with exceptional stability and generates high torque, capable of handling both positive and negative loads. Its engagement is firm and uniform. The short engaging time is accurately repeated cycle after cycle. The clutch runs at no load when disengaged.

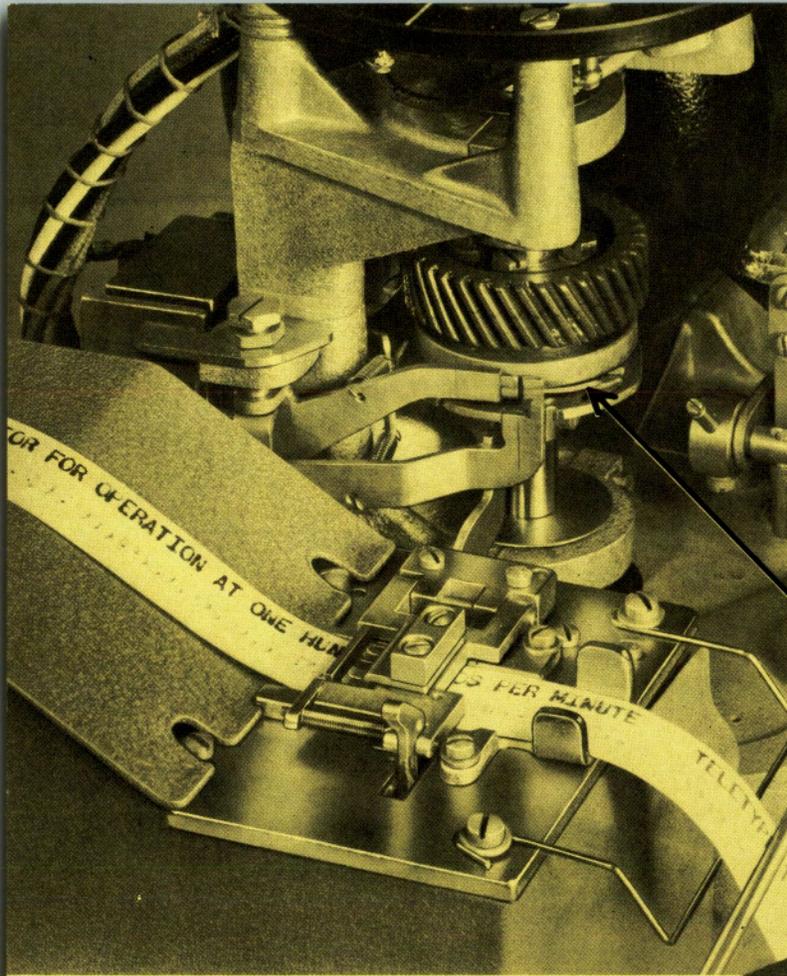

Although made to transmit a 7.42 code at 100 w.p.m., this Tape Transmitter Distributor can be operated at 60 or 75 w.p.m. with appropriate gears. Can also be furnished for operation at 65 w.p.m. (7.00 code basis).

TELETYPE TAPE TRANSMITTER DISTRIBUTOR

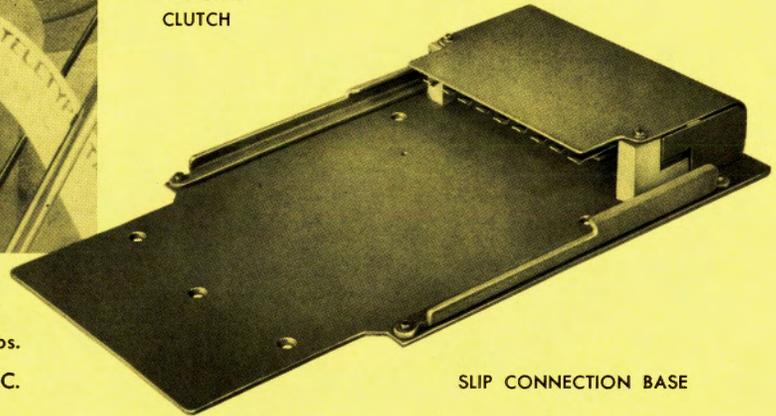

With All-Metal Clutch

GENERAL OPERATING FEATURES

- Universal Start Magnet
- Tight Tape Stop Arm
- Tape-Out Stop Mechanism
- Will transmit either neutral or polar signals.
- Accommodates 11/16" tape, either fully perforated or chadless.
- Adjustable to accommodate tape with either straight or advanced feed hole.

CLOSE-UP VIEW OF ALL-METAL CLUTCH

SLIP CONNECTION BASE

DIMENSIONS (incl. base): Width 8 3/4", Height 9 1/2", Depth 1 1/4".
APPROXIMATE WEIGHT: Net, 30 lbs.; shipping (domestic), 38 lbs.
APPROXIMATE POWER REQUIREMENTS: 65 watts at 115 V. A.C.

ORDERING INFORMATION

When ordering, please specify: *Tape Transmitter Distributor with All-Metal Clutch*, and state motor, transmission speed, and finish requirements; also optional equipment, if any.

MOTORS	SPEEDS	STANDARD FINISHES
Synchronous— 115V, 60 cycle A.C.	100 W.P.M. (7.42 code)	Gray-Green Wrinkle
	75 W.P.M. (7.42 code)	Dark Brown Wrinkle
Synchronous— 115V, 50 cycle A.C.	65 W.P.M. (7.00 code)	Dark Gray Wrinkle
		Black Wrinkle
	60 W.P.M. (7.42 code)	Black Semi-Gloss
		Light Gray Semi-Gloss

OPTIONAL EQUIPMENT

Slip Connection Base: If needed, order Slip Connection Base No. 115932, specifying color. (Teletype tables arranged for mounting Tape Transmitter Distributors come already equipped with this base.)

Radio Interference Filters: Specify if required.

Torn Feed Hole Tape Stop: Will halt transmission if tape feed holes are accidentally torn. If desired, order Torn Feed Hole Tape Stop Assembly No. 128700.

**TELETYPE MODEL 20 SENDING-RECEIVING PAGE PRINTER WITH TABLE
(6-UNIT CODE)**

The Teletype Model 20 sending-receiving page printer set provides means for interchanging type-written telegraph messages between two or more points by direct keyboard transmission. It utilizes the 6-unit permutation code which permits a wider selection of characters and operations than is provided by the 5-unit code, and prints both capital and small letters. The keyboard is similar in appearance to a standard typewriter keyboard and messages are received in printed page form on continuous roll or multifold paper.

This set, which is used primarily in conjunction with Teletypesetter applications, **will not operate** with Teletype equipment employing the conventional 5-unit code.

A set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

- Teletype Code**
- BP** **Typing Unit** (friction paper feed; type arrangement as specified)
 - BB** **Base**
 - MU** **Motor Unit** (synchronous or governed)
 - Set of Gears** (different ratios for synchronous and governed motor units)
 - BK** **Keyboard** (keytop arrangement as specified)
 - RY** **Line Relay**
 - C** **Cover**
 - Cover Front Plate** (sending-receiving)
 - Copyholder**
 - XRT** **Table***
 - REC** **Rectifier** (not required at DC stations)*
 - Speed Indicator** (required with governed motors)
 - Power Accessories** (fusetrons, resistor assemblies, etc., as required)

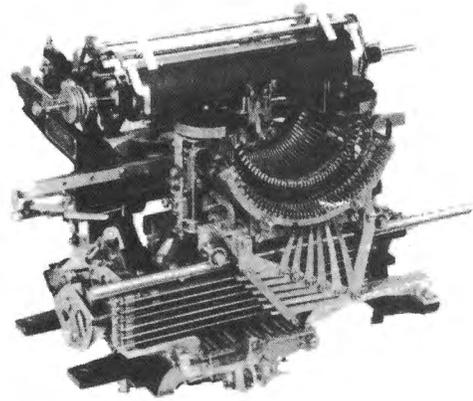

*NOTE: Not depicted on opposite page — see photograph on page 1.

**TELETYPE MODEL 20 NONTYPING REPERFORATOR SET WITH TABLE
(6-UNIT CODE)**

The Teletype Model 20 nontyping reperforator set provides means for automatically receiving and recording, in perforated tape form, printing telegraph messages (6-unit code) transmitted from either local or distant stations.

This set, which is used primarily in conjunction with Teletypesetter applications, **will not operate** with Teletype equipment employing the conventional 5-unit code.

This set consists of units and accessories, as follows, which are supplied in various combinations to meet specific operating requirements:

**Teletype

TELETYPE APPARATUS CABINET

The Teletype Apparatus Cabinet provides space-saving mounting facilities for associated equipments employed in message centers or relay offices.

The all-metal shell encloses a relay rack structure in which horizontal sliders may be installed at various levels for mounting and supporting the apparatus units. The cabinet is arranged for both front and rear accessibility, and a variety of doors, panels, control appliques and other details now available provide custom-built appearance and utility for various combinations of units. (The illustration above shows only one adaptation of the Teletype Apparatus Cabinet — details regarding specific applications will be furnished upon request.)

TELETYPE APPARATUS CABINET

This cabinet consists of an all-metal basic shell approximately 73" high, 27" wide and 24" deep, with vertical front panel space of 69½". Equipment which is designed to fit on a standard 19" relay rack may be mounted in this cabinet which is provided with a large number of holes so that horizontal sliders may be installed at various levels on which shelves may be mounted. These shelves, with the equipment, can be withdrawn for servicing.

Vertical supports with holes are included on the inside of the side panels for mounting details to accommodate various electrical service items and channels for running the signalling and power wires. Openings have been arranged at both the top and bottom of the cabinet through which cables may be brought.

The cabinet includes a recessed base 4½" high which may be bolted to the floor. This base contains a built-in equivalent of a 4" x 4" wire duct. Available accessories for the cabinet include various types of doors, terminal blocks, electrical service assemblies, interior tape collection compartments, external tape bins, message number card holders, etc.

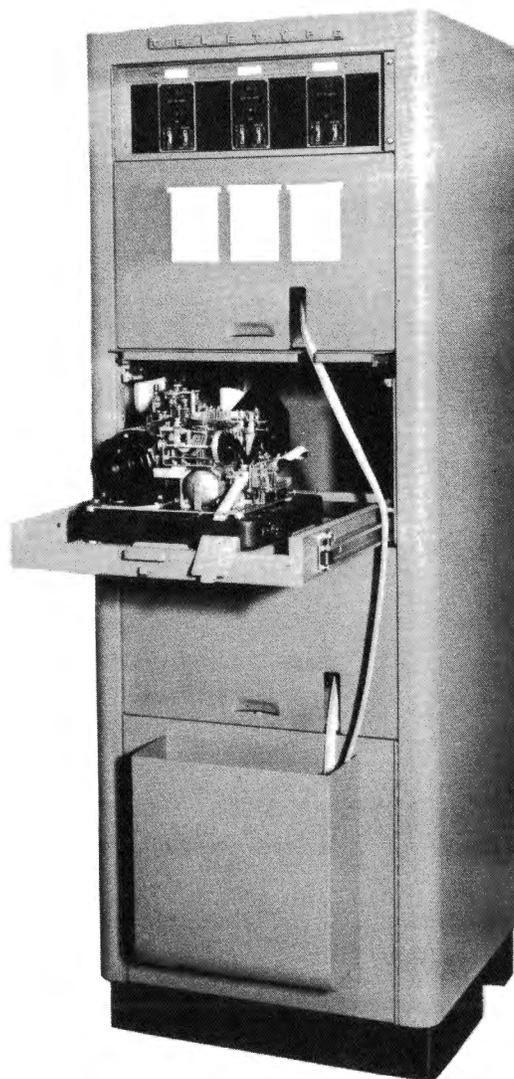

**Teletype
Code**

AC Apparatus Cabinet

APPROXIMATE DIMENSIONS

	WIDTH	DEPTH	HEIGHT
CABINET (Including Base)	27"	24"	77½"
FRONT OPENING	21½"		69½"

Weight Information: Net weight of the basic cabinet, with rear door and base (before installation of shelves, front doors and accessories) is approximately 210 lbs.

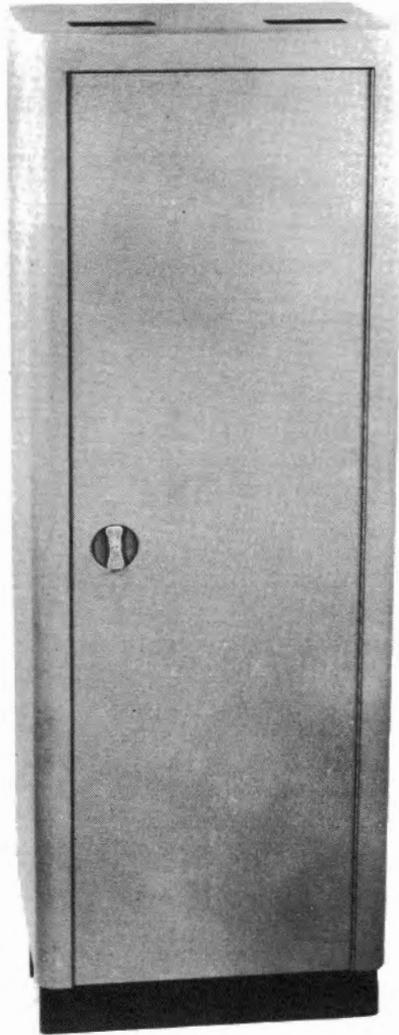

CABINET WITH SLIDING SHELF EXTENDED

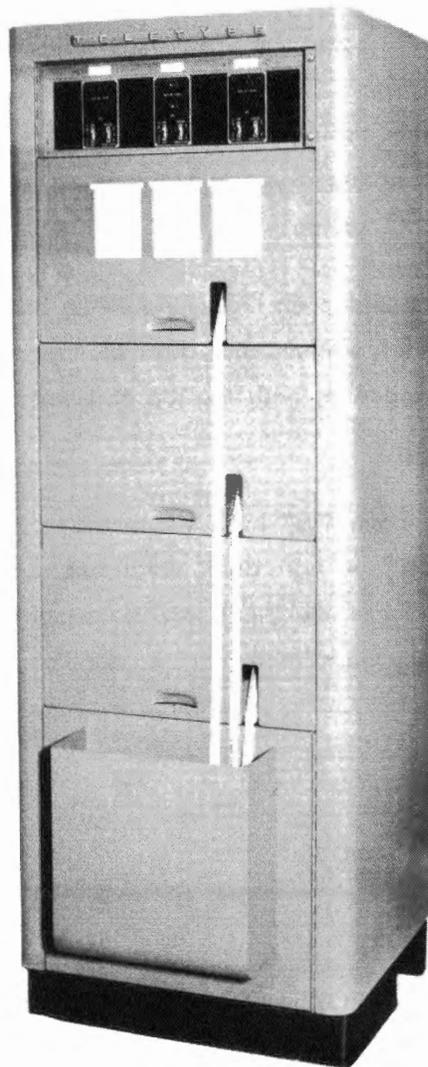

The Teletype Apparatus Cabinet shown above and on Page 1 illustrates how vertical stacking introduces floor space economies not normally realized with table mounting.

This cabinet was arranged for relay office use, and houses three receiving-only typing reperforators. Controls for the three circuits are mounted in an applique located at the top of the cabinet. The reperforators are mounted on individual sliding shelves behind disappearing doors. The tape bin is mounted on the outside of a hinged door which provides access to a large compartment left available for storage purposes.

Among the many other items which may be mounted conveniently in the Apparatus Cabinet are the compact Teletype multiple-gang message transmitter distributors and numbering transmitter distributors.
