US ARMY SIGNAL CENTER AND SCHOOL

FORT MONMOUTH, N.J.

SSTS 56001F* INFORMATION SHEET February 1965

MESSAGE PREPARATION AND HANDLING

Section I. GENERAL

1. OBJECTIVES

VIGIL

The objectives of this information sheet are --

<u>a</u>. To provide a guide which you can use in preparing and classifying military messages, including DD Form 173, Joint Messageform.

b. To provide procedures that may be used in handling messages within a head-quarters.

2. INTRODUCTORY INFORMATION

At some time in your military career you are certain to be involved with communications. You may only write and receive messages. You may function as an <u>originator</u>, a <u>drafter</u>, or a <u>releaser</u> of military messages. If you are in the Signal Corps the chances are you will function in some capacity as a communicator, even though you may not actually transmit messages by a means of signal communication. Whatever your capacity may be, you will need to know -- and to observe -- the basic rules governing the writing of military messages.

These rules have been formulated to enable the communications center (COMM-CEN) to properly fulfill its mission of promptly effecting the <u>transmission</u>, <u>receipt</u>, and <u>delivery</u> of messages. By observing them -- by presenting your messages to the communications center in proper form -- you insure the message's prompt and efficient delivery. You also do your part to cut the cost of handling and to speed up total service. Careful study of AR 105-31, the basic regulation on writing a military message, will help you to put your message in the proper form.

Army regulations provide that the communications center or cryptosecurity officer may request the drafter to make necessary changes in a message if he believes regulations governing the writing of messages have been violated. Occasion for such delay can be avoided when those who write messages understand the problems of those who process messages. For this reason, both preparation and handling of military messages are discussed in this information sheet.

* This information sheet supersedes SSTS 56001E, Message Preparation and Handling. -1- 56016

Section II, PREPARING MILITARY MESSAGES

3. GENERAL

a. A message is any thought or idea expressed briefly in plain or secret language, prepared in a form suitable for transmission by any means of communication. To define functions and responsibilities, it is important that we note the specific terminology pertaining to military message preparation.

- Originator. The originator of a military message is the commander or authority by whose direction the message is written and transmitted. All messages are written in the name of the commander or headquarters -- for example, CGONECORPS.
- (2) <u>Drafter</u>. The drafter of a message is the person who composes the message and assigns the security classification and precedence. He writes as a staff officer or in some other capacity authorizing him to write messages in the name of the originator.
- (3) <u>Releaser</u>. The releasing officer is the person to whom the originator delegates his authority to release messages for transmission. The releaser is appointed on orders and normally is associated with the distribution center or administrative sections of headquarters. He is responsible to the commander for ensuring proper preparation of messages, including such factors as economy, security classification and precedence. His signature card is kept in the communications center and his signature is honored on the basis of the authority given by the commander. A message becomes official only when it is properly signed by the releaser, and only then will it be accepted for transmission.

b. Military messages are broken down into three parts: the heading, the text, and the ending. Let's discuss these parts as they appear on the joint message form, DD Form 173. (See figures 1, 2, 3, 4, 5 and 6.)

4. THE HEADING OF THE MESSAGE

The elements contained in the heading of a message are shown on DD Form 173. They are all placed on the message by the drafter.

a. SECURITY CLASSIFICATION. The drafter selects the proper security classification consistent with the contents of the message (see appendix IV, page 21), and spaces it out as the first word of text. The security classification must also be marked or stamped in red (not typed) in the designated blocks at the top and bottom of the form (figure 6, page 12). If the message is not classified, the word UNCLASSIFIED will be typed in these blocks.

b. PRECEDENCE.

- (1) <u>Meaning of precedence</u>. Precedence plays a vital role in communications, and its significance is important to the one who writes a message, the one who transmits it, and the one who receives it.
 - (a) To the drafter of a message, precedence indicates the speed of delivery which he desires. Two factors should be taken into consideration when selecting a precedence: the contents of the message text and the time factor involved. It is important to note that precedence does not imply to the addressee when he should take action on any given message he receives. The originator must so indicate within the text when he desires action by the addressee or an answer (REQANS).

Figure 2. Single address message prepared for military addressee (contd).

- (b) <u>To communications center personnel</u>, precedence indicates the relative order in which messages will be handled. Therefore, commanders may be deprived of necessary speed of service when facilities are overloaded with excessive amounts of traffic assigned too high a precedence. Releasing officers should exercise great care in regard to precedence when authorizing transmission.
- (c) <u>To the addressee of a message</u>, precedence indicates the relative order in which he should take <u>note</u> of the messages received. He will take <u>action</u> on the one which he feels deserves primary consideration. Again, the precedence does not indicate when, or <u>if</u>, the addressee should take action.
- (2) <u>Dual precedence</u>. Multiple or book messages which contain one or more information addressees may be assigned dual precedence -- one precedence for all action addressees and, normally, one lower for all information addressees. Usually an information addressee does not need to receive the message as speedily as does an action addressee.

c. TYPE OF MESSAGE. There are four types of messages: single address, multiple address, book messages, and general. Only single address or book messages may be sent by commercial means.

(1) A single address message is a message with a single addressee.

Construction of the second state of the second state of the second state of the second state of the second state

- (2) <u>A multiple address message is a message with two or more addressees and of such nature that the drafter considers that each addressee must be informed of the identity of the other addressees. A multiple address message should not be sent when a book message will suffice.</u>
- (3) <u>A book message</u> is a message with two or more addressees and of such nature that the drafter considers that each addressee need not be informed of the identity of the other addressees.
- (4) <u>General messages</u> have a wide standard distribution. They are assigned an identifying title and usually a sequential serial number.

d. ACCOUNTING SYMBOL. The accounting symbol indicates the activity or origin of the message. Agencies outside the DOD are authorized to use the facilities of the Defense Communication System, These agencies are shown in Appendix I to Annex (B) to ACP 127 US SUPP-1, with their assigned accounting symbols. It is the responsibility of the originator (drafter) of a message from these agencies to indicate the appropriate accounting symbol on each message. Such messages are subject to military priority.

- (1) Generally, messages may be categorized as <u>official</u> (appropriated fund activities), <u>quasi-official</u> (non-appropriated fund activities), or <u>press</u> (commercial news services), and the category may be determined by the accounting symbol used. Accounting symbols are used to establish accountability for any commercial charges involved.
- (2) The accounting symbol also indicates to communications center personnel the relative order of handling, in that all official messages will be processed first, quasi-official next, and press last. Press messages are accepted for transmission under the following stipulations:
 - (a) That they contain no codes or ciphers.
 - (b) That there are no commercial facilities available.

(c) That they are subject to priority of military traffic.

(4) Examples of accounting symbols:

ARX	American National Red Cross
CHX	Army and Air Force Exchange Service
EXEC	The President of the United States
PO	Post Office Department
STARX	Stars and Stripes, Europe
PSASX	Stars and Stripes, Pacific.
计计算机 医静脉性炎 化化化物	요즘은 형은 것 같아요. 그는 것 같아요. 이 귀엽이 가슴 비슷한 것 같아요. 그는 것 같아요. 그는 것 같아요. 그는 것 같아요. 가지 않는 것 같아요. 가지 않는 것 같아요. 가지 않는 것 같아요.

e. FROM: The word FROM in this case always implies the originator, which normally means the commander. The form of the entry in this space may differ, depending on who is to receive the message. When the message is addressed to --

- (1) <u>Military addressee(s)</u>: Enter the title and location of the commander. Authorized abbreviations may be used. Do not use Army Post Office numbers or other coded distribution lists as part of an originator's address.
- (2) <u>To non-military addressee(s)</u>: In messages addressed to an individual or activity outside the military service, the originator is normally designated by the full title of the commander. The name, full title, and address of the commander may be used; abbreviations may not be used.

<u>f. TO:</u> There may be more than one addressee on the message, and these addressees may be designated as being action and/or information addressees. "TO" indicates action addressees; "INFO" indicates information addressees.

- (1) Address messages to the commander of the activity or headquarters concerned and include the geographic location.
- (2) Type each addressee on a separate line and finish on one line if possible. If not, double space and begin the second line at the left margin.
- (3) Do not use Army Post Office numbers or other coded designations as part of an address.
- (4) If the message is being prepared for one or more information addressees, type the abbreviation INFO in upper case letters on the line below the word TO and compose the addressees in the same manner as for action addressees.
- NOTE: AR 105-31 contains the authorized addressees for electrically transmitted messages.

5. TEXT OF THE MESSAGE

The text of a message consists of two sub-parts; the internal instructions and the body.

<u>a. Internal Instructions.</u> Internal instructions are located within the text of the message and are specifically addressed to the addressee. These instructions consist of three separate lines.

-7-

- (1) The first line consists of the classification, the cite number (message reference number) and additional instructions.
- (2) The second line is the subject line. The subject line is used in all messages except tactical and previously established format messages. The subject line may be omitted if its use will require an otherwise unclassified message to be classified, if it will noticeably increase the length of a brief message, or if it will increase commercial charges when the message is addressed to activities served by commercial communications facilities. The subject should be as brief as possible and limited to one line. The abbreviation for the word subject (subj) may precede the subject for clarification. A single letter abbreviation of the subject classification will be included in parentheses after the subject in classified messages.
- (3) The third line is the reference line. The cite number of the referenced message appears in this line.

Examples of Internal Instructions appear below:

August Martin and Martin

- EXAMPLE: UNCLAS EXG-45675 From DCSOPS Subj Training Exercises Ref Your TGWL-7867 DTG 192030 Jan
- EXPLANATION: This Unclassified message, cite number EXG-45675 is from the operations staff section (DCSOPS) in answer to message identified as TGWL-7867. The subject is training exercises.
- EXAMPLE: CONFIDENTIAL SPECAT CRYPTO EG-45698 My EG-36748 DTG 160805 Jan
- EXPLANATION: This Confidential message is a special category message requiring security protection or handling not guaranteed by the normal security classification. The term "CRYPTO" means this message contains information which requires that personnel be formally authorized access to such information in accordance with AR 604-5. The subject line was omitted in this message (see a(2) above).
- EXAMPLE: UNCLAS E F T O EX-89578 Declassification System Your DA 4456789 NOTAL DTG 140750 Jan
- EXPLANATION: This unclassified message required "Encryption for Transmission Only." The subject of this message is Declassification System. The message refers to DA 4456789. NOTAL indicates that not all of the addressees of this message received the referenced one. Two examples of possible application of UNCLAS E F T O are explained in figure 4.
 - (4) Some other types of internal instructions which are used occasionally are listed in Table I on page 9.

<u>b.</u> The Body. As a drafter of a military message the first thing to consider is whether electrical transmission is really necessary. If time is not critical, will postal facilities suffice? In preparing the message, follow these simple rules:

- (1) Prepare the message in easy reading form as in normal correspondence, using both upper and lower case typing or military block printing when necessary.
- (2) Number and indent paragraphs.

ंह	T	A T	٦Ť (13	т.
1	1.4	4 F	51	Æ	8. T.

TERM	MEANING	USE
PERSONAL FOR	This message is to receive the attention of the individual whose name follows "PERSONAL FOR."	For Allied operations (ACP 121). (<u>Not</u> authorized for DA use.)
ACTCOM	Responsibility for dissemination and other necessary action in respect to class II instal- lations and activities is assigned to com- manding generals, continental armies, and CG Military District of Washington.	Within DA.
STAFACT (replaces ACTCHIEF)	Responsibility for dissemination and other necessary action with respect to class II in- stallations and activities is assigned to heads of the Army Staff Agencies, CGUSAMC, and CGUSACDC.	Within DA.
FOUO	For Official Use Only.	In all messages that contain unclassified in- formation and require protection under AR 345-15.

- (3) Use digits, do not spell out numbers.
- (4) Normally, do not use abbreviations. However, if the drafter has reasonable knowledge that the addressee is familiar with them, abbreviations authorized by AR 320-50 may be used.
- (5) Use punctuation only when necessary for clarity.
- (6) In the last paragraph of text of a classified message include Regrading Instructions as outlined in AR 380-6.

6. THE ENDING OF THE MESSAGE

The ending of a military message prepared on DD Form 173 consists of that information contained in the blocks reserved for the drafter and the releaser.

a. Drafter. The drafter completes this portion of the message form as follows:

- (1) TYPED NAME AND TITLE. Type data identifying the drafter in this block. The block may be used for the drafter's signature, if required.
- (2) PHONE. Enter the drafter's telephone number in this block.
- (3) PAGE NO and NO OF PAGES. Number each page consecutively and indicate the total number of pages.
- (4) SECURITY CLASSIFICATION. By completing this block, the drafter completes the requirement that a prepared message must indicate the security classification at the top and bottom and as the first word of text. (See paragraph 4 a above.)

b. Releaser. The function of the releasing officer is to approve and authorize the message for transmission. This is accomplished when he signs the form above his name block and fills in the date-time-month-year blocks. The releasing officer will also initial all copies of continuation sheets (DD Form 173-1) to ensure completeness and authenticity of the message.

Section III. NORMAL MESSAGE HANDLING PROCEDURES

7. FUNCTIONS OF THE DISTRIBUTION CENTER (OR STAFF MESSAGE CONTROL AGENCY)

The AG Distribution Center at tactical commands, or the Staff Message Control Agency (SMCA) at non-tactical echelons, serves as a contact between the communications center and the various staff sections and offices within a headquarters. It is normally operated by the adjutant/Adjutant General. Some of the functions of the distribution center (or SMCA) are to expedite the flow of official message traffic to and from the communications center and to reproduce and distribute sufficient copies within the headquarters. In so doing, the distribution center becomes the office of permanent record for all outgoing and incoming messages of the command.

8. OUTGOING MESSAGES

<u>a</u>. Outgoing messages are prepared by the <u>drafter</u> and sent to the <u>releaser</u> (fig. 7) who has the responsibility of acting for and in the name of the commander to <u>authorize the transmission</u> of the message. The signature of the releaser assures that the message is official and acceptable to the commander. The message then goes to the distribution center or SMCA, where a copy of the message is filed for record purposes, en route to the communications center for transmission. A good SOP provides for speedy handling of each message once it has been signed by the releaser. In most headquarters the adjutant general or adjutant serves as the releaser. However, this does not preclude the commander from delegating such authority to one or more staff sections, as in the case of a unified command.

Figure 7. Message flow within a command: outgoing messages.

<u>b.</u> From the distribution center, outgoing messages are forwarded to the communications center where they are accepted and then processed for transmission to their destinations.

9. INCOMING MESSAGES

a. Incoming messages are received and edited by the communications center. Editing by the communications center consists of correcting obvious errors, converting call signs and address groups to addressee designations, and removing or converting communications terminology. They are then forwarded to the distribution center (or SMCA). (See figure 8.)

Figure 8. Message flow within a command: incoming messages.

<u>b.</u> In accordance with its SOP, the distribution center determines who in the command is to receive a copy of the incoming message. Additional copies are then prepared and distributed within the headquarters or activity by the distribution center. The commanding officer is responsible for issuing instructions concerning the number of plain-text copies of classified messages that will be made and distributed. This number should be the <u>barest minimum</u> consistent with requirements.

c. The communications center normally receives messages in duplicate. The original copy is forwarded to the distribution center and the duplicate copy is temporarily retained for the communications center files.

10. IN TACTICAL SITUATIONS

In some instances, such as in tactical situations, the commander may authorize various staff sections to file outgoing messages directly with the communications center. When this occurs, the drafter in effect becomes his own releasing officer. Also, in some instances, the communications center is authorized to deliver traffic directly to the addressee. When this occurs, the addressees themselves become responsible for any further distribution. Such a procedure is often followed by communications centers operating at division level and below.

11. ACCEPTANCE OF MESSAGES FOR TRANSMISSION

The communications center will accept any military message offered for transmission which is properly authorized as official, unless the message contains profane or obscene language. Should there be any doubt as to the propriety of a message, it is submitted to the communications center officer in charge (OIC) for a decision before transmission. Improperly authorized messages, or those containing matter of a personal nature, are submitted to the OIC for appropriate action prior to transmission.

Section IV. HANDLING CLASSIFIED MESSAGES

12. TRANSMITTING CLASSIFIED MESSAGES IN THE CLEAR

a. <u>Under no circumstances</u> may TOP SECRET messages be transmitted in the clear by electrical means.

b. In combat operations, actual or simulated, messages of any classification <u>except</u> TOP SECRET may be transmitted in the clear over any nonapproved wire or radio circuit or a combination of both, provided that --

Time cannot be spared for encryption and the transmitted information cannot be acted upon by the enemy in time to influence the situation,

AND

the transmission is authorized separately for each message by the commander or his authorized representative and the message is marked "SEND IN CLEAR" over the commander's (or authorized representative's) signature,

AND

the word "CLEAR" is transmitted at the beginning of the text,

AND

there is no linkage to a previously encrypted message.

c. When the message is received, it is marked with the phrase "Received in the Clear" prior to delivery to the addressee. Messages marked "CLEAR" or "Received in the Clear" are classified at least as CONFIDENTIAL material, and may not be readdressed. Should the addressee desire the information to be forwarded to another addressee, a new message is originated and handled as the situation dictates. This does not apply to messages that are normally not encrypted, such as enemy contact reports and other types of reports authorized to be transmitted in the clear.

13. SPECIAL INSTRUCTIONS

Special handling designators are included in the internal instructions when it is necessary to identify messages which either require a special authorization for access to the contents, or which are to be given a limited distribution. Coordination concerning requirements for the use of such designators is the responsibility of the staff element having cognizance of the plan, operation, or activity to which the designator applies. However, to facilitate recognition of these messages and provide the desired handling, one of the appropriate terms shown in <u>a</u> below will always be used in conjunction with the handling designator.

a. Special Category (SPECAT) and Limited Distribution (LIMDIS) Messages.

- (1) Special category (SPECAT) messages are those messages identified with specific projects or subjects requiring security protection or handling not guaranteed by the normal security classification and requiring that the message be handled and viewed only by specially cleared or authorized personnel.
- (2) Limited distribution (LIMDIS) messages are those messages which must receive limited distribution but may be handled by regular communications personnel within the normal handling precautions afforded by the security classification of the messages.

- (a) EXCLUSIVE. When it is essential that a message not be disseminated until after it has been seen by the individual to whom it is addressed by name, the originator may prescribe limited distribution handling by use of the handling designator "EXCLUSIVE". Unclassified messages will not be designated exclusive.
- (b) CRYPTO. When messages contain crypto information which requires that personnel be formally authorized access to such information in accordance with AR 604-5, the handling designator "CRYPTO" will be inserted in the internal instructions.

b. Identification. Message originators will identify messages requiring SPECAT and LIMDIS handling by inserting the appropriate term in the internal instructions between the security classification and the handling designator.

14. TOP SECRET MESSAGES

a. The handling of TOP SECRET messages within a headquarters is a function of command. Each commander designates a TOP SECRET control officer and such alternate TOP SECRET control officers as may be necessary to receive and dispatch all TOP SECRET material addressed to or emanating from his command. The commander also provides for the security of interoffice transmission of TOP SECRET material.

b. Each originator or holder of a TOP SECRET document will keep a record of all individuals, including stenographic and clerical personnel, who are afforded access to the TOP SECRET information in the document. This does not include individuals within an office or headquarters who may have had access to containers in which TOP SECRET information is stored, or to message center or communications center personnel who administratively handle a large volume of such information each day. Such personnel are considered identifiable by duty roster or morning report as having had access to such type information on any given date (para 24, (380-5). AR 380-5).

APPENDIX III

US MESSAGE PRECEDENCE POLICY

Effective 1 September 1963

Precedence Designation, Prosign, Use, and Examples	Handling by Communications Personnel
FLASH (Z) Reserved for initial enemy contact messages or operational combat messages. Brevity is mandatory. Examples: (1) Initial enemy contact reports. (2) Messages recalling or diverting friendly aircraft about to bomb targets unex- pectedly occupied by friendly forces; or mes- sages taking emergency action to prevent con- flict between friendly forces. (3) Warning of imminent large-scale attacks. (4) Extremely urgent intelligence messages. (5) Messages containing major strategic decisions of great urgency.	 (1) Will be hand-carried, processed, transmitted, and delivered in the order received and ahead of all other messages. (2) Messages of lower precedence will be interrupted on all circuits involved until handling of the FLASH message is completed. (3) In automatic systems, where automatic interruption of lower precedence messages is not provided, adequate procedures are to be prescribed to ensure that FLASH messages are not delayed.
 IMMEDIATE (O) Reserved for messages relating to situations which gravely affect the security of national/allied forces or populace, and which require immediate delivery to the addressee. Examples: Amplifying reports of initial enemy contact. Reports of unusual major movements of military forces of foreign powers in time of peace or strained relations. Messages which report enemy counterattack or which request or cancel additional support. Attack orders to commit a force in reserve without delay. Messages concerning logistical support of special weapons when essential to sustain operations. Reports of wide-spread civil disturbance. Reports or warning of grave natural disaster (earthquake, flood, storm, etc.). Request for, or directions concerning distress assistance. Urgent intelligence messages. 	 Will be processed, transmitted, and delivered in the order received and ahead of lower precedence. If possible, messages of lower pre- cedence will be interrupted on all circuits in- volved until handling of the IMMEDIATE mes- sage is completed. In automatic systems, where auto- matic interruption is not provided, adequate procedures are to be prescribed to ensure that IMMEDIATE messages are not delayed.

-19-

Precedence Designation, Prosign, Use, and Examples	Handling by Communications Personnel
PRIORITY (P) Reserved for messages which require expeditious action by the addressee and/or furnish essential information for the conduct of operations in progress when routine precedence will not suffice. Examples: (1) Situation reports on position of front where attack is impending or where fire or air support will soon be placed. (2) Orders to aircraft formations or units to coincide with ground or naval operations. (3) Aircraft movement reports (e, g. messages relating to requests for news of air- craft in flight, flight plans, cancellation mes- sages to prevent unnecessary search/rescue action). (4) Messages concerning immediate movement of naval, air, and ground forces.	 (1) Processed, transmitted, and delivered in the order received and ahead of all messages of ROUTINE precedence. (2) ROUTINE messages being transemitted should not be interrupted unless they are extra long and a very substantial portion of the ROUTINE message remains to be transmitted. (3) PRIORITY messages should be delivered immediately upon receipt at the addressee designation. (4) When commercial refile is required, the commercial precedence that most nearly corresponds with PRIORITY will be used.
ROUTINE (R) Reserved for all types of mes- sages which justify transmission by rapid means, unless of sufficient urgency to require a high precedence. Examples:	(1) Processed, transmitted, and deliv- ered in the order received and after all mes- sages of a higher precedence, consistent with the following:
 (1) Messages concerning normal peace- time military operations, programs, and pro- jects. (2) Messages concerning stabilized tac- tical operations. (3) Operational plans concerning pro- jected operations. (4) Periodic or consolidated intelligence reports. (5) Troop movement messages, except when time factors dictate use of higher pre- cedence. (6) Supply and equipment requisition and movement messages, except when time factors dictate use of higher precedence. (7) Administrative, logistic, and per- sonnel matters. 	 (a) When commercial/civil refile is required, the lowest commercial precedence shall be used. (b) ROUTINE messages received during nonduty hours at the addressee destination may be held for morning delivery unless specifically prohibited by the command/formation concerned.

<u>Note:</u> NATO and other Allied commands/nations may continue to use the other two precedences (EMERGENCY and DEFERRED). When such messages enter a communications system of the United States, the following applies:

- (1) EMERGENCY messages will be handled before IMMEDIATE and after FLASH messages.
- (2) DEFERRED messages will be handled after ROUTINE messages.

APPENDIX IV

CATEGORIES OF MILITARY INFORMATION

CLASSIFICATION	MATERIAL SO CLASSIFIED	AUTHORITY TO CLASSIFY
TOP SECRET	 This classification shall be authorized only for defense information or material which requires the highest degree of protection. TOP SECRET classification shall be applied only to that information or material, the defense aspect of which is paramount, and the unauthorized disclosure of which could result in exceptionally grave damage to the Nation, such as: A definite break in diplomatic relations affecting the defense of the United States. An armed attack against the United States or its allies. A war. The compromise of military or defense plans, intelligence operations, scientific or technological developments vital to the national defense. 	 Secretary, Undersecretary, and Ass't Secretary, and Ass't Secretary, and Director of Research and Development. CofS, VCofS, Deputy Chief of Staff, Hq, DA. Chief, R & D. Secretary of the General Staff. The ACofS/Intel. CG, USCONARC. CG, USCONARC. CG, USAADC. Comptroller of the Army Heads of the Tech Staff (par 44, AR 10-5). Major oversea commanders. Commanders ZI armies and MDW. Chief, USASA.
SECRET	 This classification shall be authorized only for defense information or material, the unauthorized disclosure of which could result in serious damage to the United States, such as: Jeopardizing the international relations of the United States. Endangering the effectiveness of a program or policy of vital importance to the national defense. Compromising important military or defense plans, scientific or technological developments important to the national defense, or information revealing important intelligence operations. 	 TOP SECRET The General Counsel, OSA. Chief of Legislative Lia- ison, OSA. Chief PIO, OSA. The Admin Ass't, OSA. The ACofS for Reserve Components. Chief of CA & MG. The IG.

56001

CATEGORIES OF MILITARY INFORMATION (contd)

CLASSIFICATION	MATERIAL SO CLASSIFIED	AUTHORITY TO CLASSIFY		
CONFIDENTIAL	This classification shall be authorized only for defense information or material, the unauthorized disclosure of which could be prejudicial to the defense interests of the nation.	Any of above, who may also delegate authority in writing.		
CONFIDENTIAL- MODIFIED HAN- DLING AUTHOR- IZED	CONFIDENTIAL defense information as herewith described may be identified by the term CONFIDENTIAL-MODIFIED HANDLING AUTHORIZED: combat or combat related operations, actual or sim- ulated, related to military planning, op- erations, training, communication, and the logistical support thereof.	Same as CONFIDENTIAL.

APPENDIX V

AUTOMATIC TIME-PHASED DOWNGRADING AND DECLASSIFICATION SYSTEM

1. PURPOSE

The purpose of this appendix is to show the principal provisions of AR 380-6 (AFR 205-2, OPNAVINST 5500. 40B), title same as this appendix.

2. POLICY

AR 380-6 establishes a continuing system, based upon the passage of time, for automatic downgrading (including declassifying) of classified defense information originated by or under the jurisdiction of the Department of Defense (DoD), the Federal Aviation Agency (FAA), and the National Aeronautics and Space Administration (NASA). This is only general information; AR 380-6 should be consulted for detailed instructions.

3. GROUPING OF CLASSIFIED INFORMATION

All classified information is assigned in one of four groups, briefly described below.

	a. Group 1	Material. This	s type of material	l is generally	of non-DoD	origin. Typical ex-
3900	No. 2012 Standard Street South and the Market States and States	and the second	an a	and a start of the second start of the second s		가장 가슴을 모두려 가 가지? 이 가 가지 않는 것이 하는 것이 가지? "사람은 것 같은 것
am	ples are	하는 것, 강태가 같은 것, 것이 있는 것	전에 관련 등 고객 관심을 가슴다.	말한 방송을 병을 시작했어. 같은	일은 비난 이 가만! 첫	바라 가장은 것이 않는 것이 하고, 있어?

(1) Material attributed to foreign governments, or their agencies.

(2) Material attributed to international organizations and groups.

- (3) Material attributed to the Combined Chiefs of Staff.
- (4) Material involving communications intelligence (COMINT) and cryptography (CRYPTO); communications portion of cover and deception plans.
- (5) Restricted data; nuclear propulsion information; US Atomic Energy Detection System data.
- (6) Standardized BW agents; special munitions information.

b. Group 2 Documents. These documents, originally classified TOP SECRET or SECRET, contain extremely sensitive information. Application of Group 2 classification is as follows:

- (1) Any document containing or revealing information so extremely sensitive that, in the interests of national security, must remain in the original classification for an indefinite period.
- (2) This categorization applies only to FAA, NASA, and DoD documents originated on or after 1 January 1946, which would normally fall into Group 3 or Group 4.

c. Group 3 Material. This type of material warrants a security classification for an indefinite period. Typical examples are:

- (1) War plans prepared by headquarters higher than an Army division, a Navy task force, or a Numbered Air Force.
- (2) DoD and FAA intelligence and counter-intelligence.

- (3) Combat capabilities, limitations, vulnerabilities of a weapon, weapon system, or space system (current or future).
- (4) Precise geodetic and gravimetric survey data which could be used to develop target data.
- (5) Ordnance demolition techniques.
- (6) Formulation and conduct of United States foreign policy.

d. Group 4 Material. This includes material not qualifying for, or assigned to, the first Logistical data Production schedules Budget and cost schedules Dimensions or weights

Dimensions or weights
